1. The instructor was an effective discussion leader.

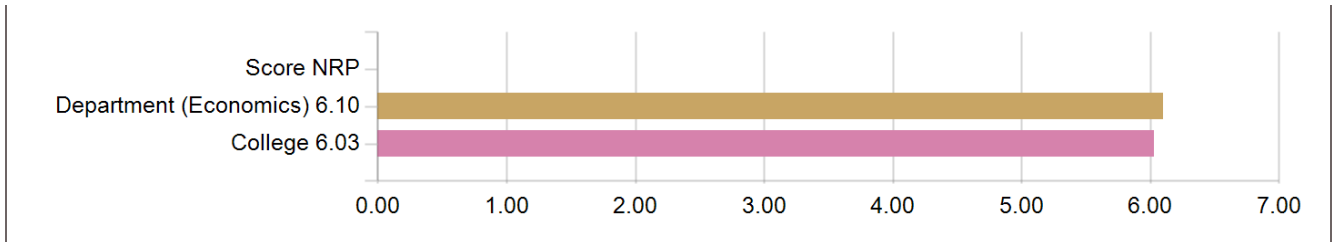

2. The instructor raised interesting and important questions.

3. The course environment encouraged students to express themselves.

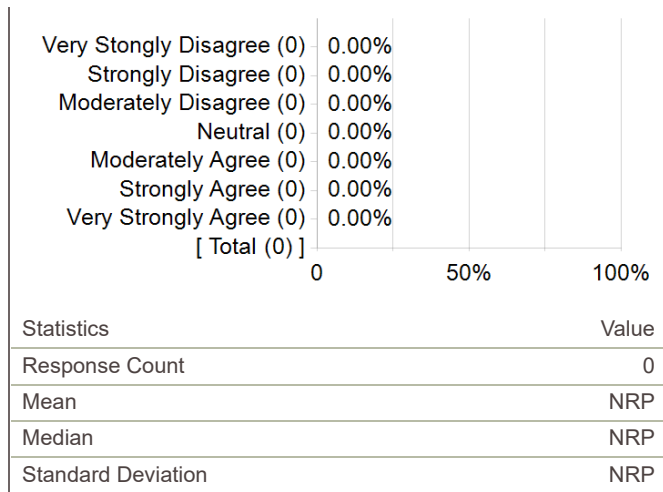

4. The discussion portion of the course was instrumental in my learning.

What information and/or concepts covered in this course did you find most valuable?

Comments
Learning the basics of supply and demand. It helped me understand what I read in the news much better.
I really enjoyed the supply and demand concepts as well as trade.
Everything about macroeconomics and the graphs used to display and analyze macroeconomic concepts.
I found most of the concepts learned in the class very useful. I mostly liked learning about the government policies.
I found the connections from the material to everyday products and events that we encounter most valuable.
I found that this course applied economic concepts to the real world which I think is very valuable as I got to see how they actually work.
When we learned about taxes and real world scenarios.
I personally really enjoyed the game theory segment of this class, I love to apply that concept into my daily life decisions.
All of it
I think the book review was really helpful in solidifying a lot of the key concepts from class.
I found learning about real world examples the most helpful because it helped me understand how the content was applicable in real life.
Trade, Real world examples, Supply and Demand Assignments, taxes.
I loved the topic of externalities.
I though many concepts were useful but particularly the supply and demand, the commons, price discrimination. I can not choose one topic I thought I really learnt basic economics from this class.
Supply and demand, Trade, economic growth, GDP, functions of money, taxes, game theory
The economic way of thinking and basics of supply and demand were well explained early on and I felt prepared for rest of semester. The 3Ps—>3Is was probably the biggest, most valuable concept to me from class.
Property rights and supply and demand + institutions
I think learning about basic economic structures was really helpful and this was a really solid intro class.
I really liked game theory, prisoner's dilemma, etc.
I found the foundational topics of supply and demand to be most valuable, it helped me see the world through a new lens.
I learned about the overall topics of economics, both micro and macro. I think that overall, the subjects we covered were ideal for an introductory class to economics. It did not go in-depth with many concepts, but the overall concepts were clear.
I enjoyed learning about Supply and Demand
Price discrimination, game theory
property rights
I liked learning about the supply and demand models. I thought it was interesting to see how these could be applied in real life.
I enjoyed most about externalities.

What did you like best about the course (the things you would least like to see changed)?

Comments
I liked learning from powerpoints I also really enjoyed th in class activities as they helped my understanding of the topics we were learning.
I really enjoyed the supply and demand assignments as well as the economic comic book.
The format of the midterms and the supply and demand assignments.
I liked that I could read about the concepts we were learning about and then in class we were properly told about it in more detail. I feel like I learn best this way and it's why I will take 101 with professor Woltz.
The in class assignments because of how interactive they were.
I liked that the professor was very active and engaged in the way she taught, especially with our in-class activities.
I liked how we had power points to look back at post class.
I really enjoyed the straightforward exam format and the clear lectures. Additionally, the readings were very useful, though at times could be overridden with repetitive examples, they explained the concepts of the class well.
I liked the professor's teaching method
The workload was the perfect amount.
The game we played at the end of the semester was great. In future sections, I think it would be a good idea to play the game at the beginning and the end of the semester. Then there could be a discussion about how strategy changed after learning the fundamental concepts.
I liked reading the book for the book review best because it helped me focus on one topic for longer and see how many aspects of the class contributed.
I really liked this course as a whole. I thought that the lectures were good and had a lot of engaging aspects to them. I enjoyed our mock trade game. This game taught me a lot about the economic world. Dr. Woltz took our feedback about doing more in class activities and implemented it really well. I really enjoyed her class.
The in class activities
I really enjoyed how the professor was so willing to meet and help up. Even though the topics are challenging she made them seem so simple and understandable.
When we were able to play in class games that helped apply what we were learning to the real world.
I loved the comparative advantage game we played in class it was SO fun. I really liked the readings and lectures and thought both of them well-prepared me. The power points were super well organized, clear, and accessible. Supply and demand assignments were helpful. The tests were great; they covered what we learned exceptionally well.
Nothing I really didiked this class
I think the supply and demand assignments were really helpful and the powerpoint lecture notes were also really useful.
The book review!
I really liked doing the book report. I went in thinking it would be tedious but the book I picked was really interesting and the fact that there's a five page limit really helps ensure that it is meaningful and not just busy work.
I liked the in-class activities that got us engaged with the material. The games and application of theories we went through made the class more enjoyable rather than just lectures. I think the interaction with the material was what I liked the most.
I liked the supply and demand assignments
I like how the Professor taught about injustices and discrimination through an economic lens. She made our list of texts for the book review inclusive of different marginalized groups and was overall a wide variety.
I loved the activity of the planets, it was very fun and engaging. Overall, I enjyoyed the class activities and the format of the tests
I liked the supply and demand assignment and the lectures were interesting.
What I liked best about the course is that the textbook. It was very interesting and engaging for me to read. I relly liked the class in general! I loved how understanding and accommodating the teacher was to me I genuinely appreciate her!

What did you like least about the course (the things you would most like to see changed)?

Comments
N/A
I did not really enjoy the in-class activities. They were quite stressful.
The lack of clarity about what was specifically taught during lectures and what we would actually be assessed on in future papers, projects, and tests.
I think in professor Woltz could have asked the class a bit more questions but after having a survey for us mid semester, she really tried to do that and was very open to new ideas which I loved.
The supply and demand assignments because they were kind of repetitive.
N/A
I wish we went over graphs more and more specific questions to study for the exam.
I really enjoyed the structure of the class, however, the paper did throw me off guard in the principles of Economics course.
I really liked the in-class activities (could have been more)
NA
I did not like the lecture style of class. I often found it confusing and not very helpful to listen to. It wasn't very engaging so I found it hard to get anything valuable out of it.
I did not love that there were so many readings from so many different resources. It was kind of annoying to have to find a bunch of different books and then only read a few chapters from each.
I didn't like the graphing
I think that the course is really good overall. Even though you will realize that the Professor is SOO caring, nice and approachable, in the first 2 weeks she seemed a bit intimidating.
The reading were distributed to many differently places which made them hard to find.
I was not a huge fan of Moblab it was really confusing and I had no idea what was happening. I don't think it was instructors fault more so that Moblab in general isn't helpful. In-class group games/activities are much more engaging and helpful.
Format, how homework was handled, and the fact that there were no problem sets or extra assignments
I don't think there's really anything that needs to be changed.
I didn't like the supply and demand assignments.
The tests are marked too harshly
I did not really have any things I did not like.
I least liked the amount of time we had to prepare for tests, or be tested on things. What we cover in class versus what we see in the tests was not always correlated and what was asked of us in the tests was never applied in class before. For example, in the free response, we never got a clear understanding of what details would be useful to look at. We never practiced with much of the materials in class that are asked of us in the test.
I wish there were more review problems before midterms and ways to test our knowledge
I liked everything
It was difficult to obtain the reading a lot of the time without buying it, which was hard financially. Further, the lecture slides were interesting but sometimes it was a lot of text on the slides which made it difficult to take notes.

I really enjoyed Professor Woltz and I love seeing more women in such. male-dominated field.
Thank you!!!!
I enjoyed Dr. Woltz's class a lot. She did a great job of making it interesting, and I especially liked that she connected most of what we learned to the world and applied all of the concept to things we would see in real life. Awesome class and awesome professor.
I really enjoyed Woltz as a professor and she made a clear and effective effort to listen to the feedback we gave her.
Dr. Woltz is literally one of the best teachers and I LOVED her class. Looking forward to taking her again in the future!
I really like this course as it is!
I love the professor, she is really good and teaches very well and is engaging.
It was a good class!
